Achieving UA requires a multistakeholder approach.

tech companies web developers  
 Software developers UASG  
 EAI Researchers UA  
 Tech enthusiasts  
 private sector registrants  
 academia language experts  
 media API stakeholders  
 email operators

Govt. end users  
 policy IDN  
 open data community  
 TLD

We are playing our part...  
 so should you!

5

Goals of Universal Acceptance (UK)

- \* Build new / update existing Application Programming Interfaces (APIs)
- \* Email Address Internationalization (EAI)
- For users @ test.org to have same acceptance as @ server.tech or @ server.org

PS: These are not real email addresses! Just illustrations!

We have a GitHub repo...  
<https://github.com/Universal-Acceptance-for-You/>

6

The Internet Corporation for Assigned Names & Numbers (ICANN) community develops policies that allow these identifiers to work well.

Until 2010, the global Domain Name System (DNS) only allowed Top Level Domains (TLDs) in the Latin script.

A	B	C	D	E	F	G	H	I
J	K	L	M	N	O	P	Q	R
S	T	U	V	W	X	Y	Z	

All domain names should be treated equally.

Domain names and e-mail addresses should be accepted, stored, processed and displayed in a consistent and effective manner.

For any device to reach another on the Internet, it needs a unique identifier (like icann.org) or a name (like icann.org) or a number / IP address (like 192.0.43.7).

**What is Universal Acceptance?**
